

back in time to ancestral generations

parent

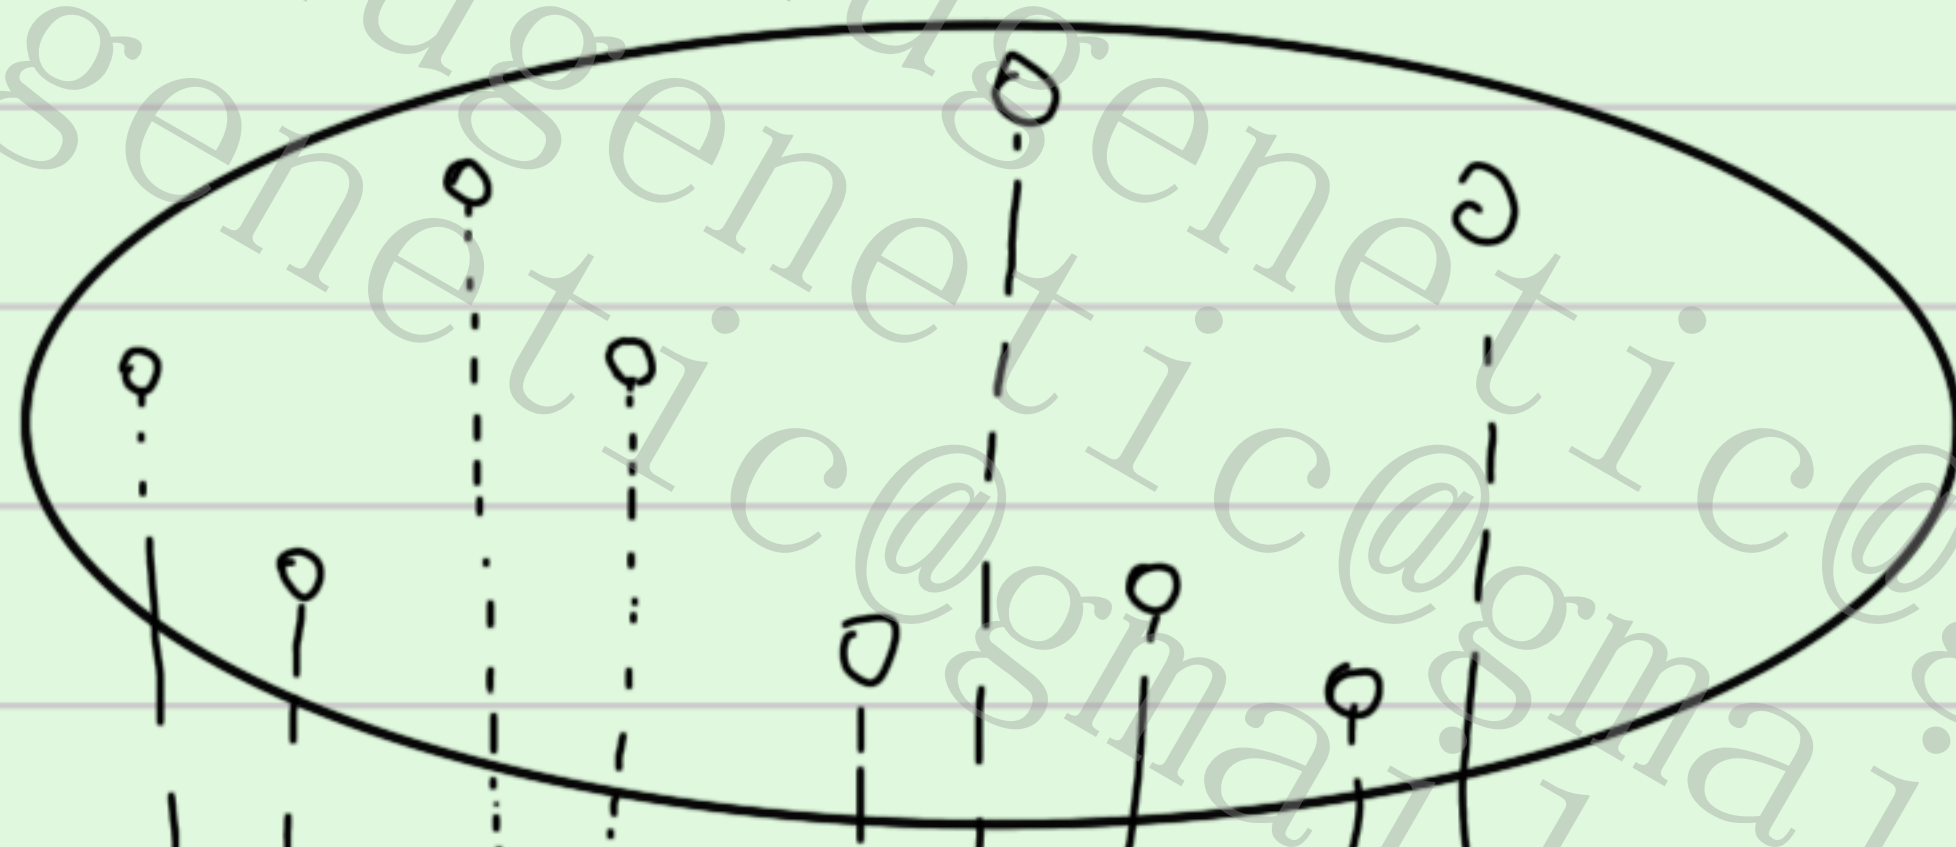

tossing $n=10$ balls randomly into i (randomly select from $2N$) boxes, $i=1, 2, \dots$

current generation

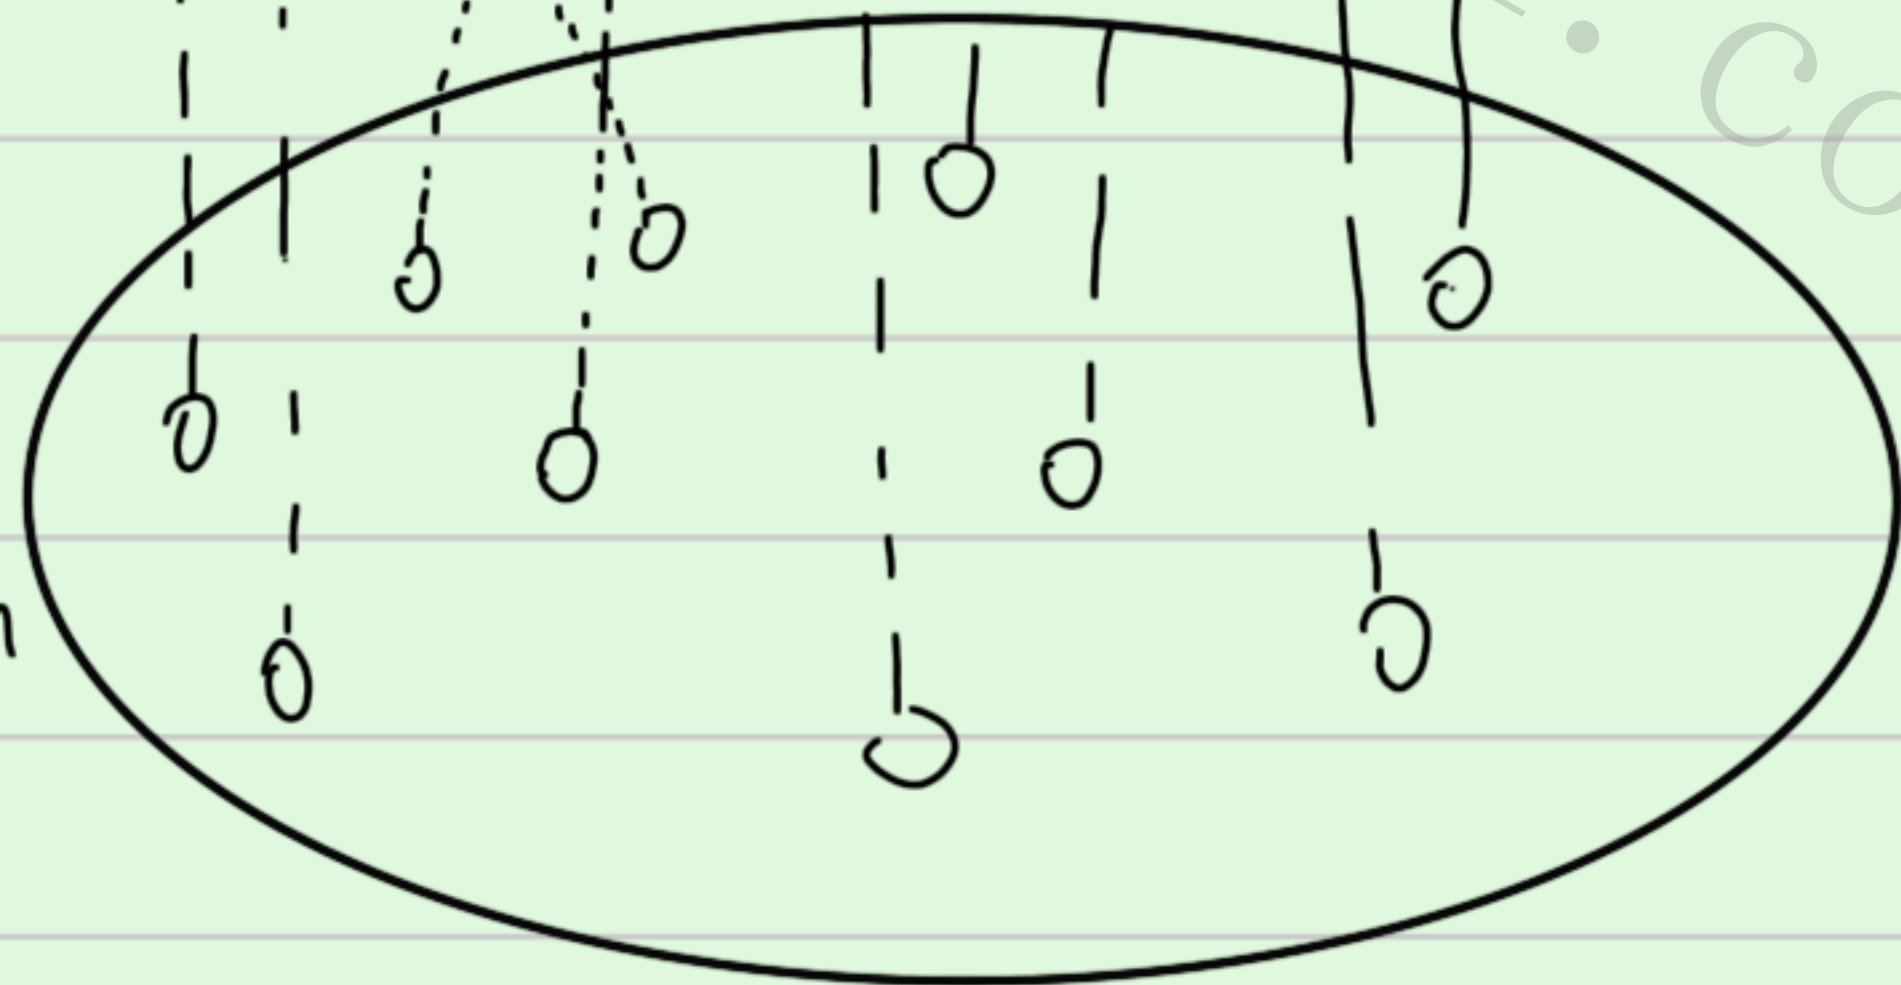

$$G_{n,i} = \frac{\sum_n^{(i)} A_n^i}{N^n}$$

last generation

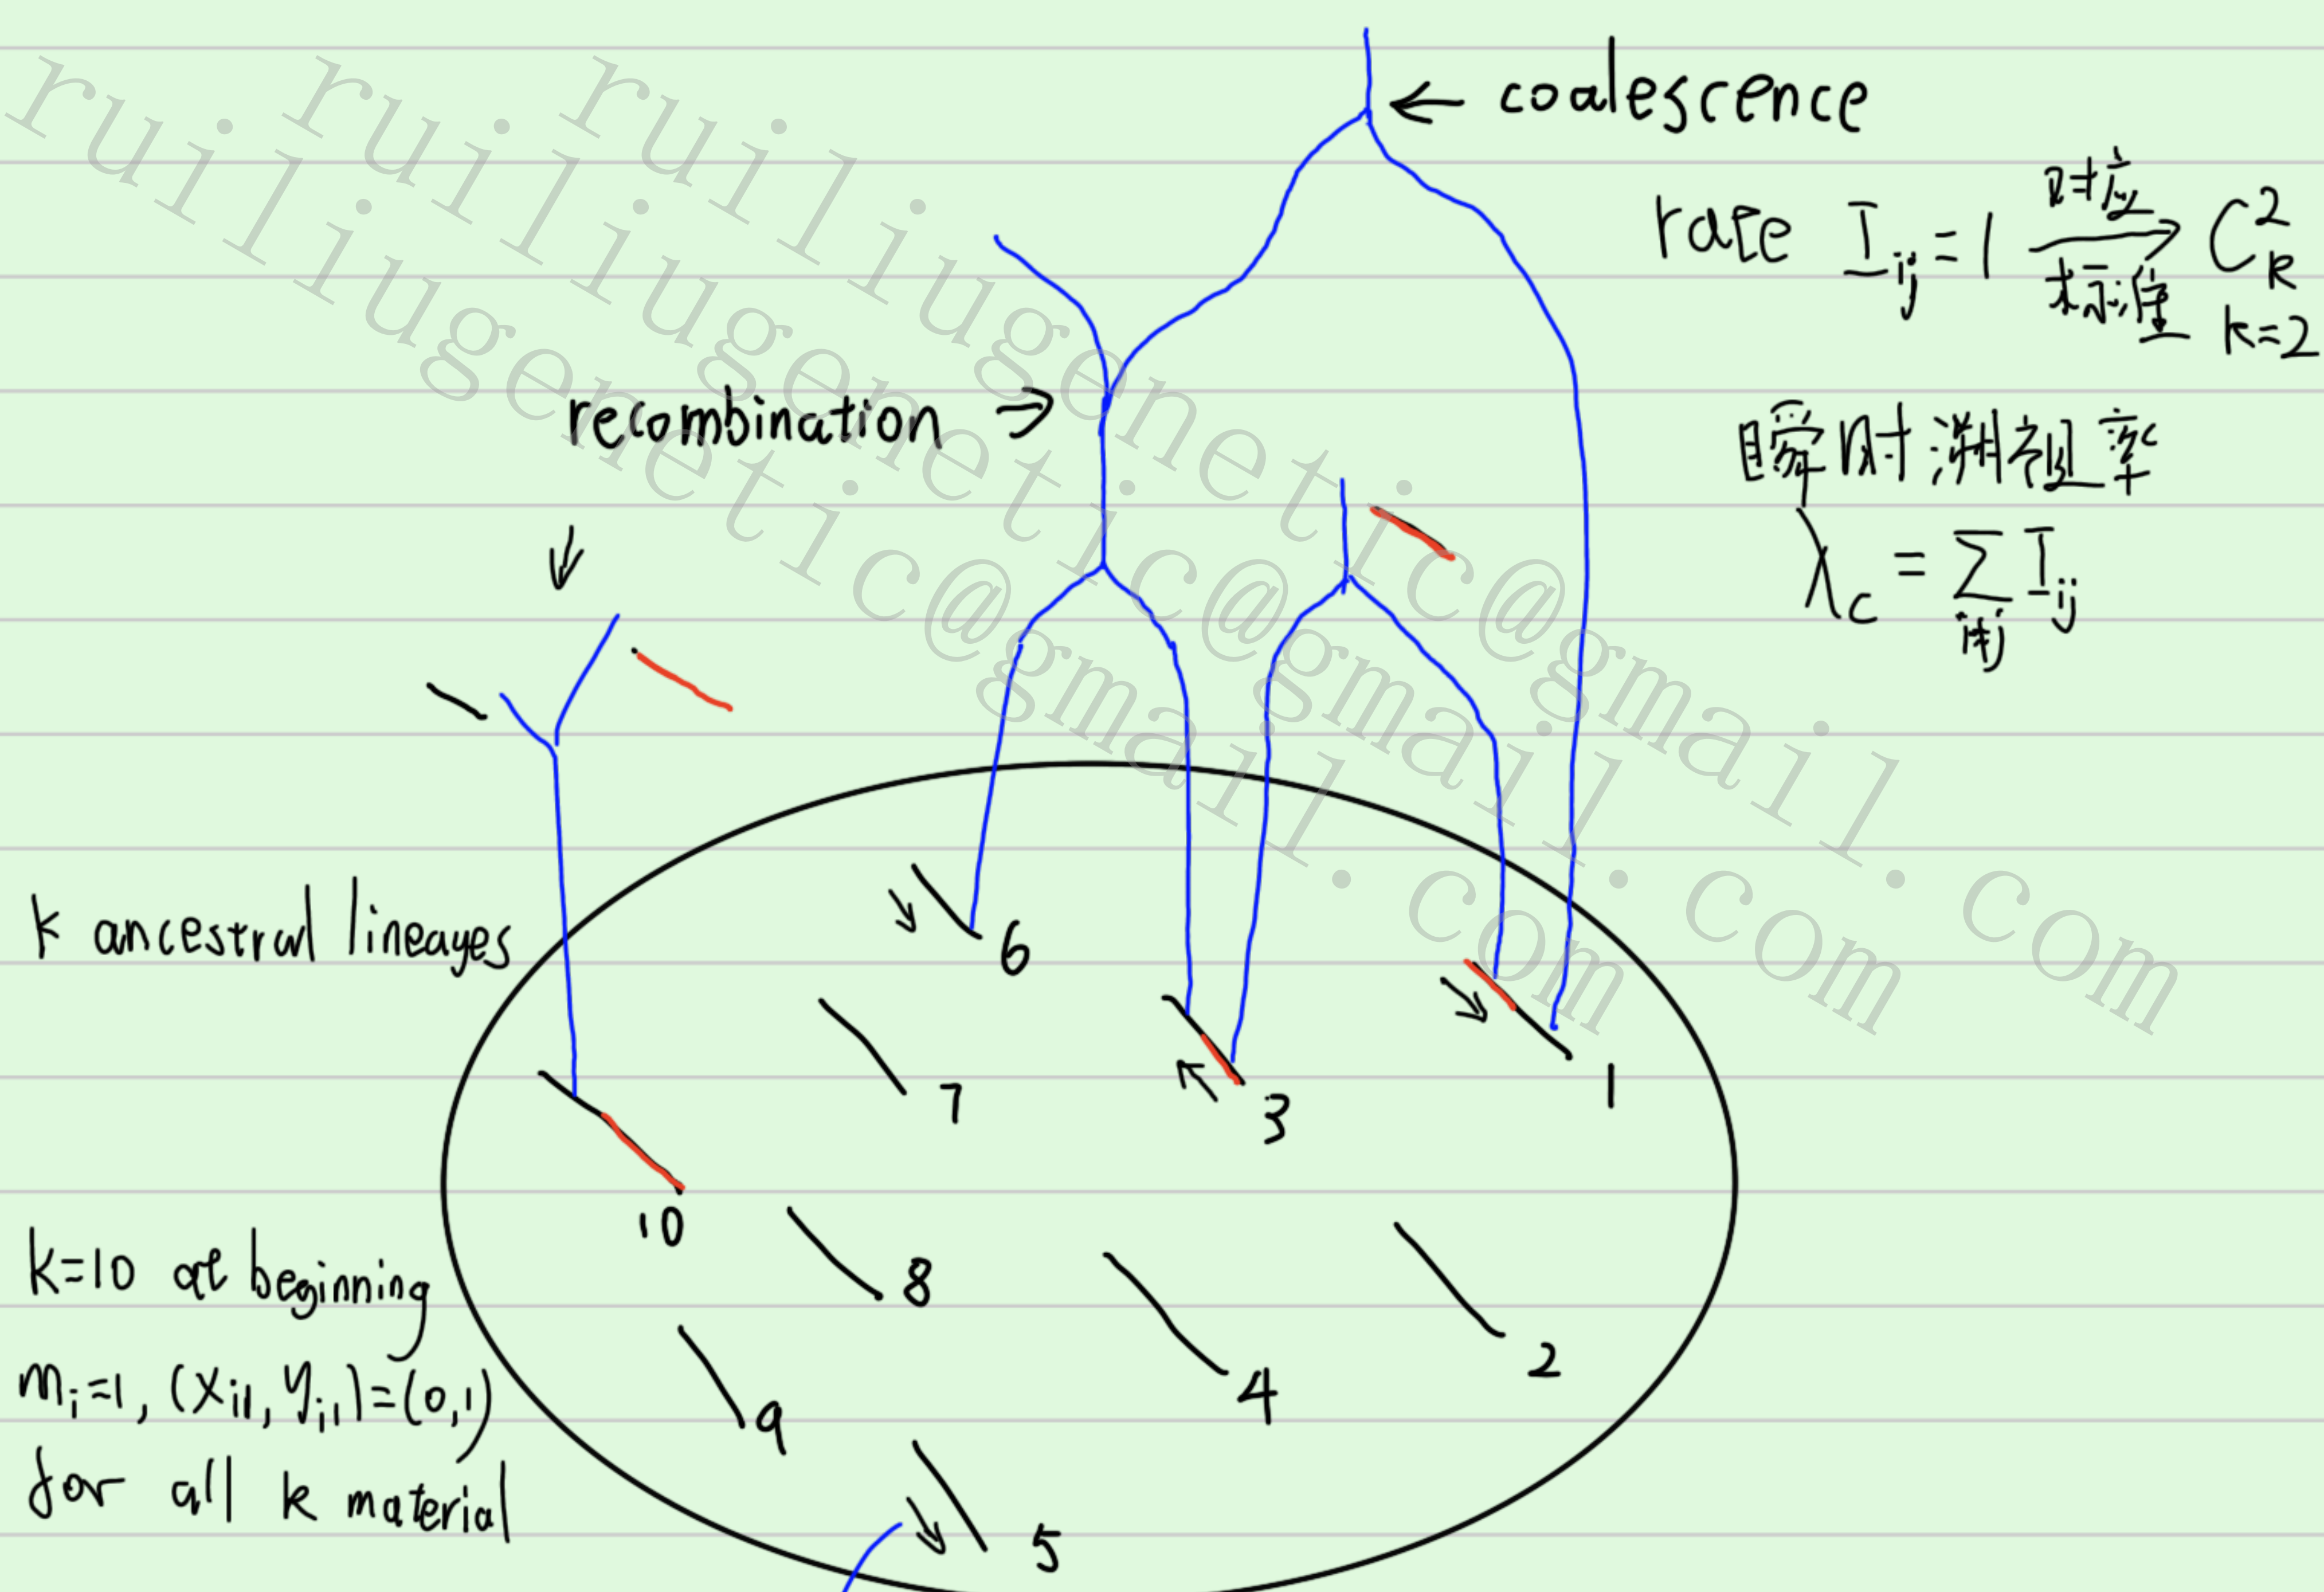

$i=n-1$

current generation

n samples

after coalescence, if any interval remain just one ancestral lineage i.e. only the MRCA of that interval, $k=1$ for the interval, remove the interval.

(若某区间在溯祖之后, 所有样本合为一个MRCA, 则移除该区间)

停止 无共祖片段之间溯祖. 即 $I_{ij}=0$, 如果两片段间无重叠 ancestral 片段
